

Nepal Home Service Platform (Plumber, Electrician, Repair Services) - Business & Technology Roadmap

Executive Summary

Build a web-first home-services marketplace for Nepal covering plumbing, electrical, AC repair, appliance repair, cleaning, carpentry, painting and maintenance. Start in Kathmandu Valley, validate operations first, then launch customer and technician apps.

Market Opportunity

Target urban households, renters, landlords, apartments, offices, restaurants, schools, clinics and NRN families booking services for relatives. Key value proposition: verified technicians, transparent pricing, warranty, fast dispatch and digital payments.

Competitor Overview

Major competitors include Sajilo Sewa, Skill Sewa, Bhetayo, A2Z Marmat, Doorsteps Nepal and local technician networks. Differentiate through reliability, arrival guarantees, technician quality, pricing transparency and annual maintenance contracts.

Business Model

Revenue sources: 15–20% technician commission, service fee, emergency surcharge, annual maintenance contracts (AMC), renovation lead commissions and spare-parts margin.

Recommended Pricing

Visit fee: NPR 300–650. Plumbing/electrical jobs: NPR 600–3000+. AC servicing: NPR 1500–3000. Larger renovation projects use quote-based pricing.

Technology Stack

Frontend Website: Next.js + TypeScript. Backend API: NestJS + TypeScript. Database: PostgreSQL. Storage: S3-compatible object storage. Mobile Apps (later): Flutter. Payments: eSewa, Khalti, Cash.

Website Features

Homepage, service pages, pricing, booking system, customer login via OTP, technician onboarding, booking tracking, warranty claims, reviews, contact page, legal policies and SEO landing pages for each service category.

Customer Booking Flow

Choose service -> Enter address -> Upload photos -> Select time -> View pricing -> Confirm booking -> Technician assignment -> Service completion -> Payment -> Review.

Admin Dashboard

Manage bookings, technicians, pricing, customers, payments, commissions, complaints, reports, coupons, warranties and service quality.

Technician Portal

Accept jobs, navigate to customers, upload photos, submit estimates, mark completion, view earnings and manage availability.

Database Design

Core tables: users, technicians, customers, services, prices, bookings, payments, reviews, complaints, notifications, quotations and payouts.

Development Roadmap

Phase 1: Validation and manual operations. Phase 2: Full website and admin system. Phase 3: Progressive Web App (PWA). Phase 4: Customer mobile app. Phase 5: Technician mobile app and expansion to additional cities.

Launch Strategy

Start with Plumbing, Electrical, AC Repair, Appliance Repair and Water Tank Cleaning. Focus on Kathmandu Valley before expanding to Pokhara and other cities.

Team Requirements

Founder/Operations Lead, Backend Developer, Frontend Developer, UI/UX Designer, QA Tester, Customer Support, Field Supervisor and Technician Onboarding Team.

Key Success Factors

Trust, verified technicians, fast dispatch, service warranty, transparent pricing, customer support and strong operational execution.
